The NEW Scenes feature
NEW App version V11.17

- Scenes feature
- Example programs for layer effects
- New tile carousel for targets and programs
- Select DMX profile by number
The new Scenes feature allows you to pre-define sets with a specific effect, you are basically making CUE’s. It is now faster than ever to change effects to multiple sets at one time.
Reset your lights before use

- Reset and Unpair CRMX
- After reset, make sure the light are lighting “RED”
- 4 ways to reset your lights
Reset lights

Reset with “list of connected lights”

- Reset and Unpair CRMX
- Press “Reset Lights” & “Unpair CRMX” and confirm by clicking “OK”.
- After reset, make sure the light are lighting “RED”
Reset lights

Reset through main menu

- Reset and Unpair CRMX
- Lights will start flickering, use ARC1 (ON button) or the Enter/Power ON/OFF button on lights
- After reset, make sure the light are lighting “RED”
Easy Targeting

Quickly create groups of lights, assign positions and select which lights should receive commands.
More possibilities

- See the current effect
- Adjust your brightness
- Highlight your target
Creating sets and groups

Create and edit your sets fast and easy

Arrange the tiles to create overview

Add and remove lights
3 Different SET selections

Create and edit your sets fast and easy

Arrange the tiles to create overview

Re-name your sets

Add and remove lights
Creating a Sync set

All lights do the same
Add lights to the Sync Set

3 ways to add lights
- By clicking ON button on the ARC1 Remote
- Press the ENTER or ON/OFF button on the light
- Select them on the “list of lights” in the App.
Create multiple sets

- To be able to make the scenes work, you would need to create more than one set.

It does not matter if it is a “Sync”, “Flow” or “Individual” sets. As long as you create more than ONE set to attach to the Scene you want to create.
Pre-define the effects

Use the standard effect or create your own which you want to assign to each set before creating a scene.
Effects

Assign an effect to each set
Create and edit your sets fast and easy
Arrange the tiles to create overview
Re-name your sets
Add and remove lights
How to add a new scene

- “Sets” must be created before creating a “scene”
- Select an effect to the different sets which you want in the “scene”, adjust brightness if needed.
- Create a new effect, select “Add a scene”
New Scenes feature

Choose the sets

- Choose which set/group you want to be attached to the scene
- See the current effect on the set
- Name your new scene
- Save the scene and choose a location
Create and name the Scene

- Re-name your Scene to create better overview
